Adhesives are chosen for their holding and bonding power. They are generally materials having high shear and tensile strength. Structural adhesive is a term generally used to define an adhesive whose strength is critical to the success of the assembly. This term is usually reserved to describe adhesives with high shear strength (in excess of 1,000

Adhesives Handbook - J. Shields - Google Books

adhesives, the most durable, water-resistant bonds develop when the adhesive flows deeply into cell cavities and infil-trates inside the cell walls. The standard for excellent bonds is that the wood breaks away from the adhesive joint and that the bond strength is equal to the strength of the solid wood.

Adhesives with Wood Materials

Adhesive, also known as glue, cement, mucilage, or paste, is any non-metallic substance applied to one or both surfaces of two separate items that binds them together and resists their separation. The use of adhesives offers certain advantages over other binding techniques such as sewing, mechanical fastenings, or welding.
