Algebra is just like a puzzle where we start with something like " $x - 2 = 4$ " and we want to end up with something like " $x = 6$ ". But instead of saying "obviously $x=6$ ", use this neat step-by-step approach: Work out what to remove to get " $x = \dots$ " Remove it by doing the opposite (adding is the opposite of subtracting) Do that to both sides

Many people think there is only one
“ right ” way to teach geometry. For two
millennia, the “ right ” way was Euclid ’ s
way, and it is still good in many respects. But
in the 1950s the cry “ Down with
triangles! ” was heard in France and new
geometry books appeared, packed with
linear algebra but with no diagrams.

The Greeks created a geometric algebra where terms were represented by sides of geometric objects, usually lines, that had letters associated with them, and with this new form of algebra they were able to find solutions to equations by using a process that they invented, known as "the application of areas". "

Introduction to Algebra

This course is an introduction to the modern abstract theory of groups and rings. Groups are abstractions connected with the concept of symmetry, and rings are “ abstract number systems ” in which there are versions of the arithmetic operations: addition, subtraction, multiplication, and (sometimes) division.
