Articulatory Phonetics

The field of articulatory phonetics is a subfield of phonetics that studies articulation and ways that humans produce speech. Articulatory phoneticians

# Download Free Articulatory Phonetics

explain how humans produce speech sounds via the interaction of different physiological structures. Generally, articulatory phonetics is concerned with the transformation of aerodynamic energy into acoustic energy.

Articulatory phonetics - Wikipedia

Articulatory phonetics refers to the “aspects of phonetics which looks at how the sounds of speech are made with the organs of the vocal tract” Ogden (2009:173). Articulatory phonetics can be seen as divided up into three areas to describe consonants. These are voice, place and manner respectively.

Articulatory Phonetics – All About Linguistics

Articulatory phonetics is the branch of phonetics concerned with describing the speech sounds of the world's languages in terms of their articulations, that is, the movements and/or positions of the vocal organs (articulators). The most influential system of articulatory description and transcription of speech sounds has been that of the International Phonetic Association (IPA), which aims to provide a phonetic symbol for every phoneme for every language.
