Adaptations Section 1 ...

Online Library Chapter 25

Plant Responses And

Plant Responses explain why plants need to respond to their environment in terms of the need to avoid predation and abiotic stress. Like animals, plants must also need to respond to external stimuli. This is important to: Avoid predation. Avoid abiotic (non-living) stress. Maximise photosynthesis. Obtain more light, water

Therefore, the subject of abiotic stress response in plants - metabolism, productivity and sustainability - is gaining considerable significance in the contemporary world. Abiotic stress is an integral part of “ climate change, ” a complex phenomenon with a wide range of unpredictable impacts on the environment.
