This book is both an historic and nostalgic look at the role of the Land Rover in the emergency services over the last 70 years. Land Rover products have been used by the emergency services almost from the moment the first Land Rover left the factory in 1948. Their agility and size made them an immediate hit with fire services, where they initially became popular as factory fire tenders. Their cross-country ability and versatility then attracted police forces, especially outside Britain, and when long-wheelbase models provided extra space, they also became favourites for ambulance conversions. Some emergency-service conversions required very little adaptation, and were carried out in the workshops of the end-users. Others – such as six-wheel Range Rover fire tenders – required major alterations from the factory-standard vehicle. Meanwhile, specialist companies developed dedicated ambulance and fire tender bodywork, creating a fascinating variety of different types. Some of these conversions, such as police patrol vehicles, went on to become part of the background to everyday life. Others are much less well known, and have their own special interest. All of them help to illustrate the versatility and adaptability of Land Rovers and their more modern SUV siblings. Land Rover Emergency Vehicles will interest Land Rover enthusiasts and emergency-vehicle enthusiasts alike, and many of the types illustrated will evoke nostalgic memories of these vehicles in their heyday.

The provision of support for troops in Iraq and Afghanistan is made more difficult because they operate in remote locations and harsh conditions. Despite the challenging operational environments, the Ministry of Defence (MOD) has successfully delivered around 300,000 personnel and 90,000 tonnes of freight to Iraq and Afghanistan over the last two years. However, it has not consistently met its targets for delivering supplies in a timely fashion. The MOD

is taking measures to improve the effectiveness of its supply chain; and the amount of time a unit waits for items to be delivered has reduced by half in Afghanistan and a third in Iraq. £4.2 billion has been approved to upgrade or buy new equipment to meet urgent requirements in the two theatres. The NAO found that the availability of this equipment has generally met or exceeded targets, though there have been spares shortages with some fleets particularly when the vehicle is used for a different purpose than intended. The availability and serviceability of helicopters has exceeded MOD targets, although prioritisation of spare parts for operations has led to reduced availability in the UK. There are also shortages of equipment for Service personnel in the UK to train with, prior to deployment overseas. Accommodation, medical and welfare services to Service personnel on operations are generally satisfactory although provision at the smaller patrol bases is more basic. The helicopter borne Medical Emergency Response Teams provide quick, life-saving medical support to casualties and evacuate them speedily to hospital.
