Naval architecture, or naval engineering is an engineering discipline incorporating elements of mechanical, electrical, electronic, software and safety engineering as applied to the engineering design process, shipbuilding, maintenance, and operation of marine vessels and structures. Naval architecture involves basic and applied research, design, development, design evaluation (classification ...

Naval architecture - Wikipedia

Naval architecture is the name given to the science and engineering of designing and manufacturing of sea-going vessels such as ships, yachts, powerboats, steamers, tugs, fishing boats, barges, warships, cruise ships, icebreakers and even submarines. In addition to these, the study of naval architecture also deals with the design and manufacturing of offshore structures of all kinds whether commercial or military.

What is Naval Architecture: Careers, Courses & Jobs For ...

Naval architecture involves the design and construction of the world's largest moving structures and most powerful vehicles. As a Naval Architect, you'll deal with everything from huge ships to sailing yachts, from fast ferries to offshore wind turbines and oil platforms. Why study naval architecture?

Naval Architecture Degree Courses, UK | University of ...

Naval architects are engineers responsible for the design, construction and repair of seafaring vessels, including ships and boats, and offshore structures As a naval architect you'll work in a team with other engineers from various fields and disciplines, coordinating activities and carrying ultimate responsibility for a project - ensuring its effective, safe and economical completion.

Naval architect job profile | Prospects.ac.uk

Our naval architecture department provides a complete range of technical work to support naval vessels, commercial shipping projects and customised vessel designs for the mineral sands, mining and resources industry. Our naval architecture services include:

Naval architecture - BMT

Fortunately, the naval architect is able to make a full-scale check of the predicted or calculated metacentric stability before the completed ship goes to sea. By shifting liquids or solid masses whose weights and offset positions are known accurately, the centre of gravity of the whole ship is shifted and the ship is heeled.

Naval architecture - Metacentric stability | Britannica

Naval Architects are employed to give professional advice and technical support to customers of the maritime industry. Operations. Many shipping companies have technical departments in which Naval Architects are responsible for the many phases of ship and equipment procurement and for solving problems affecting the economics of maritime operations.

Careers in Naval Architecture - Royal Institution of Naval ...

The Royal Institution of Naval Architects (RINA), is an internationally renowned professional institution whose members are involved at all levels in the design, construction, maintenance and operation of marine vessels and structures. Members of RINA are widely represented in industry, universities and colleges, and maritime organisations in over ninety countries.

The Royal Institution of Naval Architects -RINA

Naval Architecture is a mechanical engineering discipline that considers systems for maritime use, such systems including boats, ships, offshore platforms and underwater systems. The use of these systems, for example in transport, in shipping and in the oil industry, to a large extent shape the conditions for today's societies.
