These findings demonstrate that PSA early in gestation has a distinctive influence on the developing fetus. Keywords: Anxiety, child development, fetal programming, pregnancy, pregnancy-specific anxiety, temperament Introduction The prenatal period is a time of rapid development

Prenatal maternal anxiety and early childhood temperament
Elevated PSA early in gestation is associated with increased negative affectivity at 2 years of age after adjusting for concurrent maternal anxiety and prenatal obstetric risk (all t $\frac{1}{2}$ 2.02, 4, b $\frac{1}{4}$...

(PDF) Prenatal maternal anxiety and early childhood ...
The consequences of exposure to prenatal maternal anxiety for the development of child temperament were examined in a sample of 120 healthy, 2-year-old children. Prenatal maternal state and pregnancy-specific anxiety (PSA) were measured five times during pregnancy, and maternal state anxiety was measured again at 2 years post partum. Child temperament was measured at 2 years using the Early Childhood Behavior Questionnaire.

Prenatal maternal anxiety and early childhood temperament ...
Maternal anxiety was measured with the Crown-Crisp Experiential Index at 18 and 32 gestational weeks, and two and 21 months postpartum. Mothers scoring in the top 15% at one or more of the four time points were considered to have anxiety.

Pre- and post-natal maternal anxiety and early childhood ...
Maternal anxiety increases during the first postpartum month. Women with high trait anxiety, low education, a history of depressed mood, and a perception of high peripartum stress are at risk for experiencing anxiety at this time. Depression and Anxiety, © 2007 Wiley Liss, Inc.

Maternal anxiety: course and antecedents during the early ...
A second possibility is that maternal prenatal anxiety alters maternal prenatal immune responsiveness, which is transmitted to the fetus. We did not address this hypothesis in the current study, but we note that data are so far inconclusive about the impact of psychiatric symptoms on immune parameters in pregnancy (Blackmore et al., 2011). Third, prenatal anxiety may alter infant immune responses by exacerbating those immunological features that are known to be immature in the infant ...

Prenatal Maternal Anxiety Predicts Reduced Adaptive ...
Maternal anxiety was measured with the Crown-Crisp Experiential Index at 18 and 32 gestational weeks, and two and 21 months postpartum. Mothers scoring in the top 15% at one or more of the four time points were considered to have anxiety.

Pre- and post-natal maternal anxiety and early childhood ...
In the present review, we examine the association between maternal prenatal stress or anxiety and children's early negative reactivity or self-regulation. The review includes 32 studies that focus on pregnancy-related anxiety, state or trait anxiety, perceived stress, and stressful life events in relation to child's crying, temperament, or behavior during the first 2 years of life.

The Relations Between Maternal Prenatal Anxiety or Stress ...
Maternal depression, anxiety, and stress during pregnancy have been associated with poor fetal development and poor birth outcomes, including preterm birth (PTB) and low birth weight (LBW) [4, 7]. PTB or LBW children are at risk of emotional or cognitive problems, including an increased risk of attention deficit/hyperactivity, anxiety, or language delay [8].

Effects of Antenatal Maternal Depression and Anxiety on ...
The size of the left hippocampus during early development is likely to reflect the influence of the exposure to perinatal maternal anxiety, whereas right hippocampal growth is constrained by antenatal maternal anxiety, but enhanced in response to increased postnatal maternal anxiety.

Maternal anxiety and infants' hippocampal development ...
In early pregnancy, persistent morning sickness (Chou et al., 2008) and concerns for income and pregnancy-related issues (fetal development, miscarriage and fetal delivery, etc.) (Zhang et al., 2017) can cause greater stress and emotional alterations, further leading to symptoms of prenatal anxiety (Bowen et al., 2008), which will in turn prompt the occurrence of prenatal stress (Zhang, 2017).

Influencing factors for prenatal Stress, anxiety and ...
In Project Viva, the association persisted in early ($r = -0.21$; 95% CI - 0.7, - 0.16) but not mid-childhood. We observed cohort-specific associations for maternal anxiety and depression in Project Viva that did not replicate. Conclusions: The ZNF575 gene is involved in transcriptional regulation but specific functions are largely unknown. Given the widespread use of antidepressants in pregnancy, as well as the effects of exposure to anxiety and depression, implications of potential fetal ...

Prenatal maternal antidepressants, anxiety, and depression ...
humans, maternal anxiety and depression during pregnancy have been found to predict childhood disruptive behavior problems after controlling for postnatal environmental factors [4, 5], and prenatal maternal anxiety predicts persistence from childhood to adolescence [6]. Equally some studies have failed to identify associations

Prenatal anxiety, maternal stroking in infancy, and ...
This study aimed to investigate the prevalence and influencing factors of maternal stress, anxiety and depression in early pregnancy and provide scientific basis for reducing prenatal mental disorders.

Influencing factors for prenatal Stress, anxiety and ...
Results showed that trait anxiety and pregnancy-specific anxiety were uniquely related to almost all parenting stress constructs, taking depression into account. Early prevention and intervention to reduce maternal anxiety in pregnancy could hold the key for a more advantageous trajectory of early postnatal parenting.

From prenatal anxiety to parenting stress: a longitudinal ...
When studying the relationship between maternal stress during pregnancy and long-term cognitive development, it was affirmed that an excess of cortisol in the foetal brain can damage myelin sheaths in the CNS, which will cause problems related to low cognitive development during adolescence [21].

Influence of Maternal Stress during Pregnancy on Child ' s ...
We aim to evaluate associations of maternal prenatal antidepressant use, anxiety, and depression with cord blood DNA methylation across the genome at birth and test for persistence of associations in early and mid-childhood blood DNA.

Prenatal maternal antidepressants, anxiety, and depression ...
Additionally, a slower rate of behavioral recovery from the painful stress of a heel-stick blood draw was predicted by elevated levels of maternal cortisol early in pregnancy as well as prenatal maternal psychosocial stress throughout gestation.

Prenatal maternal stress programs infant stress regulation
We observed that elevated depressive symptoms of the early second trimester, after controlling for prenatal maternal general anxiety, were significantly related to smaller right amygdalar volumes in the whole sample.

Prenatal maternal depressive symptoms are associated with ...
Maternal pregnancy-related anxiety symptom during the first (interquartile range 8–11 weeks) second (interquartile range 25–26 weeks) and third (interquartile range 33–34 weeks) trimesters were assessed using the Pregnancy-Related Anxiety Questionnaire (PRAQ).
