Biostatistics for Oral Healthcare offers students, practitioners and instructors alike a comprehensive guide to mastering biostatistics and their application to oral healthcare. Drawing on situations and methods from dentistry and oral healthcare, this book provides a thorough treatment of statistical concepts in order to promote in-depth and correct comprehension, supported throughout by technical discussion and a multitude of practical examples.

This book represents the seventeenth edition of the leading IMPORTANT reference work MAJOR COMPANIES OF

THE ARAB WORLD. All company entries have been entered in MAJOR COMPANIES OF THE ARAB WORLD absolutely free of This volume has been completely updated compared to last charge, thus ensuring a totally objective approach to the year's edition. Many new companies have also been included information given. this year. Whilst the publishers have made every effort to ensure that the information in this book was correct at the time of press, no The publishers remain confident that MAJOR COMPANIES responsibility or liability can be accepted for any errors or OF THE ARAB WORLD contains more information on the omissions, or fqr the consequences thereof. major industrial and commercial companies than any other work. The information in the book was submitted mostly by the ABOUT GRAHAM & TROTMAN LTD companies themselves, completely free of charge. To all those Graham & Trotman Ltd, a member of the Kluwer Academic companies, which assisted us in our research operation, we Publishers Group, is a publishing organisation specialising in express grateful thanks. To all those individuals who gave us the research and publication of business and technical help as well, we are similarly very grateful. information for industry and commerce in many parts of the world.

Few pieces of furniture, save perhaps chairs, work as hard as doors. Building them to last, especially exterior doors, takes knowledge and experience that don't come from making other types of furniture, such as tables and bookcases. Doormaking: Materials, Techniques and Projects for Building Your First Door by woodworker Strother Purdy gathers all the information and guidance that both beginning and intermediate woodworkers need to be successful making their first door. While covering the construction of the eight most popular doors, Doormaking: Materials, Techniques and Projects for Building Your First Door starts first by addressing the fundamentals: the basics of good design and proper construction technique, the pros-and-cons of common materials including wood and sheet goods, interior and exterior finishes, hardware and the fine points of hanging doors. Once those key elements are covered, Doormaking: Materials, Techniques and Projects for Building Your First Door offers project chapters that walk the reader step-by-step through the construction of eight essential doors, explaining design and material choices in specific contexts, tool options and other considerations. The first four projects are easily accessible to a beginner while the remaining projects offer up some more challenging details for the intermediate woodworker. Also included are sidebars containing amusing anecdotes and mistake stories - each delivering tips as well as details for hanging a door - and an inspiring gallery of doors that are sure to inspire. Doormaking: Materials, Techniques and Projects for Building Your First Door is a must for any woodworking hobbyist, professional craftsman, or DIY homeowner.

There is arguably no field in greater need of a comprehensive handbook than computer engineering. The unparalleled rate of technological advancement, the explosion of computer applications, and the now-in-progress migration to a wireless world have made it difficult for engineers to keep up with all the developments in specialties outside their own

This proceedings volume archives the contributions of the speakers who attended the NATO Advanced Research Workshop on "Science and Technology of Semiconductor-On-Insulator Structures and Devices Operating in a Harsh Environment" held at the Sanatorium Puscha Ozerna, th th Kyiv, Ukraine, from 25 to 29 April 2004. The semiconductor industry has maintained a very rapid growth during the last three decades through impressive technological achievements which have resulted in products with higher performance and lower cost per function. After many years of development semiconductor-on-insulator materials have entered volume production and will increasingly be used by the manufacturing industry. The wider use of semiconductor (especially silicon) on insulator materials will not only enable the benefits of these materials to be further demonstrated but, also, will drive down the cost of substrates which, in turn, will stimulate the development of other novel devices and applications. In itself this trend will encourage the promotion of the skills and ideas generated by researchers in the Former Soviet Union and Eastern Europe and their incorporation in future collaborations.

Destructive bushfires are increasing in frequency and intensity around the world. For people living in fire prone areas there are no reliable guides about which plants have low flammability and which are frighteningly flammable. Safer Gardens is that guide, with over 500 plants assessed, based on fire research from around the world. Readers can look up a plant in the Plant Flammability Table to get an idea of its flammability then turn to the A-Z for more detailed information. The book contains advice about ways to create a more firesafe garden, including the need to carefully manage the use of mulch and hedges. This is citizen science, written by a gardener for other gardeners. Complex and potentially confusing science is made comprehensible and usable, to help you make your garden and hence your house safer.

Energetic ion beam irradiation is the basis of a wide plethora of powerful research- and fabrication- techniques for materials characterisation and processing on a nanometre scale. Materials with tailored optical, magnetic and electrical properties can be fabricated by synthesis of nanocrystals by ion implantation, focused ion beams can be used to machine away and deposit material on a scale of nanometres and the scattering of energetic ions is a unique and quantitative tool for process development in high speed electronics and 3-D nanostructures with extreme aspect ratios for tissue engineering and nano-fluidics lab-on-a-chip may be machined using proton beams. This book will benefit practitioners, researchers and graduate students working in the field of ion beams and application and more generally everyone concerned with the broad field of nanoscience and technology.

A new textbook on the practical use of dental materials suitable for undergraduate dental students and

qualified dental practitioners taking post-graduate exams in dental materials, restorative dentistry, operative techniques, advanced conservative dentistry, endodontics, removable prosthodontics and implantology. Highly practical and evidenced-based throughout - closing the gap between theory and practice to give readers confidence in selecting and preparing the right material for the patient and circumstance. Amply illustrated in full colour with over 1000 photographs, artworks and tables to clearly demonstrate both materials and techniques. Helps readers appreciate the important relationship between clinical manipulation and the practical use of dental materials. Describes how to properly select a given material for any situation, how to use materials to best effect and when and how not to use them. 'Good practice' and 'Warning' boxes help readers recall important information. Uniquely written by a practising dentist with academic experience and an academic in biomaterials with extensive clinical experience. Self-assessment questions with full answers help readers consolidate learning and prepare for exams. Designed to improve clinical success and improve patient outcomes. Perfect for all undergraduate and postgraduate students studying dental material science and/or restorative dentistry.

It is no secret that a well maintained, clean and appealing home has a far better chance of selling, at a higher price and more quickly than a home that could use some work and attention. Keep in mind that first impressions always create lasting impressions - and nothing exemplifies this better than real estate. Of course, this does not mean you need to embark on a major renovation project in order to sell your home. There would be no guarantees you would be able to recoup the costs of such a large and expensive project anyway.
