Internet; the medium as an interactive process; and the ways in which the public interacts with Internet newspapers. This collection makes a substantial contribution to the understanding of newspapers on the Internet, covering their development and changes as well as the impact that news delivery through this medium has had on other media, audiences, and society. It also sheds light on improving operation and performance of Internet newspapers to better serve the public and gain competitive knowledge. The volume encourages additional scholarship in this area, and also shows how researchers can benefit from an empirical approach to their examination of Internet newspapers. Internet Newspapers will appeal to scholars, researchers, and students of journalism and mass communications, and can be used as a supplementary text in advanced courses covering journalism, communication technology, and mass media and society.

Systematic, practical, and accessible, this is the first book to focus on finding the most defensible design for a particular research question. Thoughtful guidelines are provided for weighing the advantages and disadvantages of various methods, including qualitative, quantitative, and mixed methods designs. The book can be read sequentially or readers can dip into chapters on specific stages of research (basic design choices, selecting and sampling participants, addressing ethical issues) or data collection methods (surveys, interviews, experiments, observations, archival studies, and combined methods). Many chapter headings and subheadings are written as questions, helping readers quickly find the answers they need to make informed choices that will affect the later analysis and interpretation of their data. In recent years, cultural institutions and commercial providers have created extensive digitised newspaper collections. This book asks the timely question: what can the large-scale digitisation of newspapers tell us about the wider cultural phenomenon of mass digitisation? The unique form and materiality of newspapers, and their grounding in a particular time and place, provide challenges for researchers and digital resource creators alike. At the same time, the wider context in which digitisation of cultural heritage occurs shapes the impact of digital resources in ways which fall short of the grand ambitions of the wider theoretical discourse. Drawing on case studies from leading digitised newspaper collections, the book aims to provide a bridge between the theory and practice of how these digitised collections are being used. Beginning with an exploration of the hyperbolic nature of technological discourses, the author explores how web interfaces, funding models and the realities of contemporary user behaviour contrast with the hyperbolic discourse surrounding mass digitisation. This book will be of particular interest to those who want to investigate how user studies can
